Are there any features you would like to see implemented in the application?

It would be cool to integrate a way with which to listen to a bit of the recommended songs within the site. Another cool feature might be to link to one's own last.fm account - and then avoid recommending songs the user already listens to a lot/has listened to recently.

Did you encounter any issues of any kind throughout your experience using the application?

It was a bit slow loading but appreciate this could be due to a number of factors.
I didn't feel as though the bit asking me to add in any genres to be given higher priority did much.

Please comment on if you consider the application useful.

I think it has potential to be a cool way to discover new music. The recommendations did tend to be suitable for the songs I inputted which is always a help! I'm not sure whether there is enough distinction to show why it would be used over something like discover weekly or song radios on Spotify though. If I were continuing development I'd try to find how I can differentiate well from competitors.
